The Platform for Film Schools

Storiara gives your students the same production tools used on real film sets at a price built for academic programs.

Film students using Storiara save up to 45 hours of pre-production time per project. This becomes time they put back into actually making their films. Students who sign up with a .edu email are already using Storiara at programs across the country. Advised by industry leaders from Paramount, Warner Bros, Sony, Snap, and Sphere, Storiara teaches the real production workflow from day one.

Script Breakdown Grading

Upload any script format and instantly generate a structured production breakdown. Identify scenes, characters, locations, props, wardrobe, and equipment in the platform.

Classrooms, Assignments & Call Sheets

Students send professional call sheets directly to cast and crew from inside Storiara. They practice industry-standard communication on every project, not just in theory.

Locations, Cast, Crew, and Gear Management

Every moving part of a student production lives in one place — actors, crew, props, wardrobe, and technical equipment, all connected back to the script. The same way it works on a real set.

Budget Estimates and Analytics Tracking

Students generate real budget estimates and track costs as their plan evolves. They learn to make creative tradeoffs within real constraints — exactly what the industry expects from day one on the job.

Smart Scheduling & Shot Planning

Build optimized shooting schedules in minutes. Storiara balances cast availability, locations, equipment, and scene requirements automatically — teaching students how professional schedules are built while saving them days of back-and-forth.

Education pricing: **$99 per student, per semester.** Flat rate. No per-project fees, no surprises. Minimum 10 students. Students who graduate using Storiara enter the industry already knowing the workflow.
